PREMIER DISTRIBUTOR

Torque Engineering & Automation

Torque Industries will work along side your Engineers, Site Managers or Maintenance Teams to develop a tailored solution to fit your needs. We make sure your key people are always involved to ensure they understand the processes, systems and outcomes as well as we do. It's this partnership approach that sets Torque apart.

Torque will conceptualise, design, challenge, cost and deliver your key project. It's going to be with you for years to come so it's best to get it right from day one.

The Torque Advantage

Torque Strength:

Torque's strength is its people. During the past 25 years the Torque team has grown to now include over thirty staff with countless years of experience and the right mix of skills. From our Sales Specialists, Mechanical and Electrical Engineers to our Service Technicians and Administration team we will help you to find the right solution and assist you every step of the way.

Torque Capability:

The Torque design team tailor solutions to ensure your plant, equipment and processes flow with the maximum efficiency.

We engineer automated control solutions utilising the most modern PLC products and programming to provide improved yields and manufacturing outcomes.

Design / Build / Install - The Torque team has experience in Mechanical, Hydraulic, Pneumatic or Electrical solutions and can provide a turn key solution, from concept to completion and everything in between.

Torque Safety:

At Torque Industries safety and sustainability are core values. We will assist you in the design and installation of safe, environmentally friendly systems and work practices that comply with your nominated standards. Our team is fully trained and all on site personnel are accredited engineering professionals to ensure both Torque's standards and your expectations are achieved.
